Thesis language - Lithuanian

### **Annotation**

The goal of this paper work is to analyze the campsites', rest places' and other respites' facilities and the opportunities in the national Zeimena water tourism route. The aims are the following: 1. to analyze the present infrastructure of the river Zeimena bank within the area of Svencionys region. 2. to put in groups the camping opportunities and make some suggestions how to project that. 3. to specify the means to implement the project (projects, simplified suggestions, details). I have used the comparative analytical methods for analysis. Due to the present analysis (the decisions of the detailed plan for National Zeimena water tourism route, the study of Eastern Lithuania water tourism route opportunities, press release, information on the Internet, books) we can see the state of recreational resources of the river Zeimena. I have also analyzed what holidaymakers miss and how we could satisfy their needs and minimize the harmful impact on nature. In the suggestions section I outlined the best decisions regarding the development of public infrastructure, engineer resolutions, details.
